

# OnStageDVD *for* PowerPoint

## ***Communicate Better with DVD in PowerPoint***

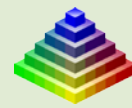

**OnStage DVD® for PowerPoint®** is the key technology for producing presentations that communicate better with DVD video. DVD is a great medium for presentations because it combines high quality video and audio with easy access to organized content.

**OnStage DVD for PowerPoint** enables presentation developers to add DVD video to any PowerPoint presentation for use with Briefings, Training, Education, Promotions, Trade Shows, Kiosks, Mobile Applications, Public Speaking and Corporate Communications.

Using standard DVD video content, presentation developers can:

- **deliver compelling presentations** that integrate a TV-like experience to viewers
- **leverage existing DVD content** organized by title, chapter or time
- **access DVD content anywhere** on a network, hard drive or DVD disk

## Better PowerPoint Presentations

**OnStage DVD for PowerPoint** allows presentation developers to offer their viewers an experience second to none, including:

- **High-quality DVD video**  
Using MPEG2 as the base video technology, DVD video is crisp with detail and provides exceptional viewing quality even at a distance.
- **Easily accessible DVD content**  
Being organized into titles and chapters, and also addressable by timecode to a half second of accuracy, any part of a DVD video is easy to access with OnStage.
- **Add DVD video to any slide**  
Any slide or combination of slides can be used to show DVD video through an OnStage player window.
- **Scalable window size**  
An OnStage player window can be resized at any time to fit within the desired design of a slide.
- **Full screen at a touch**  
At the touch of the mouse or keyboard, the operator can play the video in full screen or return back to playback in a window.
- **Sophisticated playback control**  
An OnStage player window can be setup to start in full screen. OnStage can also loop, pause or go to the next slide when playback is finished or interrupted by the operator.
- **DVD player bar**  
Standard DVD player buttons attached to a bar below the OnStage player window can be enabled to give the operator full control over DVD playback.

## Proven Technology

- **Microsoft PowerPoint**  
Operating as a plug-in to PowerPoint 2000 and higher, OnStage DVD for PowerPoint provides DVD playback capability to the widest audience of presentation developers in the world.
- **Compatibility**  
OnStage DVD for PowerPoint works on nearly all Windows operating systems that have DirectShow 7 or higher, an installed DVD decoder and PowerPoint 2000 or higher. Even the RealMagic Hollywood decoder is supported for TV output.
- **Online Error Reporting**  
OnStage incorporates access to a 24 hour automated online error facility to provide current information to presentation developers and operators when an error occurs.
- **Established Developer Base**  
OnStage player technology was introduced in 1997 and is in use by thousands of presentation developers worldwide.
- **Online Developer Forums**  
All licensed OnStage developers have free access to monitored online forums.
